# Customizable interface for LTL conformance checking

**Phase review after the third sprint**

**Group 2**

Teodora Staneva
Mohamed Amine Kooli
Ugo Detaille
Vishisht Choudhary
Daniel Henel

Aachen, December 2022

## 1. Vishisht Choudhary

Overall, I would say that this sprint 3 was like sprint 2. We were all clear on what has to be done according to the very detailed Trello cards. We again employed the technique of pair programming, and it worked very well. In my opinion, I am very satisfied with our result and hope that our client (Mr. Berti) will think the same 😊

## 2. Daniel Henel

During this sprint we were focused especially on testing our functions. Almost each of us tried to write some unit tests and it helped to discover some bugs that we had to fix. Moreover, we considered how to represent the results and show the deviations. Our teamwork was quite good, but there are still some values we need to strengthen in the team.

## 3. Mohamed Amine Kooli

On a whole, I think that this third sprint was successfully finished. Since most of the functionalities were implemented in the second sprint, we focused on finishing the last features of our product and improving it with all the details as described on Trello as well as preparing some tests for the implemented functions. Personally, I'm completely happy with the work we have done, and I would like to thank all of my teammates for their work and effort during the last period.

## 4. Teodora Staneva

During this sprint I have had some private problems and while working them through my team helped and worked and perfected our project. I am really impressed with the work and their work ethic. The project is almost finished and I'm glad that we are almost at the finish line.

## 5. Ugo Detaille

Described I believe that we have done a good job again. Most of the real work had already been done in the previous sprints, but now, we had to tackle the last details and unit tests that were still missing. The advantage was now that everyone knew what he/she was supposed to do: Clean up one's previous work. So, it made workload distribution and communication a lot easier. Still, we made sure to keep track of our progress with the help of the Trello dashboard. I am very thankful to everyone for their continuous work, and I hope Mr. Berti is too. One last step with testing and hopefully we will stay on that track.
